

SEPTIC *Fresh*

Septic Fresh doesn't just cover up odours but destroys them at their source!

The non-toxic,
Biodegradable way to save on pump-out costs, repair clogged leach drains and destroy odour in septic tanks systems

Ideal for;

** Septic Systems * Odour Control * Leach Drains * Drain Cleaning * Toilets/Urinals * Floor Cleaning * Effluent Ponds * Households * Dairies * Piggeries * Hotels * Caravan parks * Hospitals * Food manufactures*

HOW SEPTIC FRESH WORKS

Septic Fresh is designed to treat the whole system and should be used as a general purpose cleaner, then washed down drains or into grease trap after use. The dispersing begins to loosen grease and solids, breaking them into globules which flow easily through pipes and drains. At the same time Septic Fresh attacks the surface of the grease, softening it and breaking it down into simpler substances that are digested by the microbes, which spring into life when they come into contact with water. Grease and slime buildup in leach drains will be treated automatically in the same way.

Once in the septic tank, Septic Fresh breaks down the organic material and effluent. The first things that you will notice is that the bad smells have stopped.

Septic Fresh saves you the embarrassment and disruptions caused by bad odours, slow drains and clogged systems. The need for pump outs will be dramatically reduced.

WHAT IS SEPTIC FRESH?

Septic Fresh is a completely new formulation created to complement the septic range of quality products. Septic Fresh contains scientifically dapted, highly active microbes which break down grease, oil, fibers and sludge. They are contained in a unique blend of dispersants and micro-nutrients which makes the bacteria go straight to work cleaning and deodorizing toilets, bathrooms and drains as well as digesting the waste entering the septic system.

MICROBES

In nature, microbes are responsible for breaking down waste material into simple, harmless products like water and carbon dioxide. When this activity slows down, waste builds up, blockages occur and unpleasant smells are emitted.

Septic Fresh contains huge numbers of selected strains of waste digesting microbes which have been selectively bred to tolerate the harsh conditions found in blocked pipes and septic systems. When added to the tank they burst into life, helping to consume waste more rapidly.

TRACE ELEMENTS

High efficiency waste digesting microbes require specially formulated trace elements to ensure they thrive and multiply. These elements are contained within the Septic Fresh mix. It is like sending the microbes to work with vitamin pills in their lunch boxes.

NON-TOXIC & BIODEGRADABLE

Septic Fresh is non-toxic when used as recommended. Avoid contact with eyes and ingestion. Septic Fresh is environmentally safe.

SEPTIC *Fresh*

Septic Fresh doesn't just cover up odours but destroys them at their source!

Australian

Made and owned

HOW USE SEPTIC FRESH

SEPTIC TANKS

To get started, use one litre of Septic Fresh, flush the concentrate down the toilet and drains leading to the system last thing before you go to bed at night.

An ongoing treatment of 125mls / week (for an average family home) is required.

The product is also designed to be used as a cleaner for floors, bathrooms, laundries etc. If it's washed down the drains after use it will automatically treat the septic system. Using the product in this way removes the need for toxic cleaners to damage the system.

INSTRUCTIONS FOR USE

SEPTIC SYSTEMS:

Start with a one litre dose then use 125mls—1 cup per week thereafter.

Use Septic Fresh as a cleaner and rinse into the drains after use. (see instructions below)

ODOUR CONTROL:

For a smelly septic system, treat as above.

For surfaces, dilute Septic Fresh with 10 parts water and hand spray onto surfaces. Rinse /wipe off with fresh water.

LEACH DRAINS:

Leach drains will be treated automatically when you treat a septic system.

DRAINS:

Pour 1 cup of Septic Fresh down smelly or blocked drains. For best results do not use the drain immediately afterwards.

TOILETS:

Using a sponge, wash bowl and seat with 1 part Septic Fresh and 10parts water. Leave for a short time then was off with clean water.

URINALS:

Hand spray 1 part Septic Fresh and 10 parts water over urinal area (scrub if necessary). Leave for a short time then rinse with clean water.

FLOORS:

(Non-carpeted) Mop or sponge with 1 part Septic Fresh and 20-50 parts water, depending how dirty the floor is.

BATHROOMS:

Dilute Septic Fresh with 10 parts water and use to hand spray or sponge floors, walls, benches, shower recess, bath, basin etc. Rinse off with clean water.
